

# Laboratory Containment Systems Manufacturer of the Year 2018 & Best New Laboratory Safety Device: Lab-Bubble

**Containment Technology Services (CTS) designs, constructs and commissions mobile and bench mounted laboratory fume hood cabinets and safety containment systems to the pharmaceutical industry. Having recognised the firm in this year's GHP Technology Awards we profile it to find out more.**

Drawing on a wealth of experience, today CTS prides itself on being able to understand both the laboratory process and the containment applications required to provide the best balance of safety and productivity.

Thanks to its expertise in the market, CTS specialise on the manufacture of custom built systems and undertake projects from small portable devices to

large scale containment solutions. In addition, CTS range of laboratory safety cabinets includes safe handling environments for the manipulation of potent drug compounds such as powder weighing enclosures, instrument enclosures, ventilated laboratory cabinets, isolator systems as well as temperature and humidity-controlled cabinets.

The firm's laboratory containment systems are 100% British designed and manufactured,

from their Portsmouth facilities, and supplied worldwide with systems being used throughout Europe, USA, Africa, Asia and Australia. As such, CTS offer a comprehensive installation and commissioning service supplying ready-to-use safety containment systems. Product support, calibration and certification are also available. CTS are ISO9001 certified and all their systems are British and European standard compliant.

Currently, in the pharmaceutical industry, CTS is seeing higher potency drugs coming through more and more. This means that analysts need to protect themselves when working with laboratory test instruments. CTS's enclosures are part of the safety systems they need to put in place, and as such the firm is seeing an increase in uptake in its solutions

and is driving clients across the industry to utilise its innovative service offering.

With a team made up of engineers that have many years' experience in the industry, the firm is able to understand the applications that the users need to enclosure and offer them the highest possible level of support. The dedicated team at CTS learn from every project and are constantly enhancing their service offering.

Looking to the future, as part of this dedication to continued enhancement, CTS is developing new products constantly to remain at the very cutting-edge of the latest market developments. The firm will be moving to a new manufacturing facility in 2019 so it will be able to accelerate its impact in the industry and drive CTS to even greater success.
